

Extend-a-Flue

Model T (Tapered)

The Model T provides an easy way to extend your chimney and allows installation of any standard chimney cap or damper cap on top. It provides a distinct tapered look which complements any chimney. It features a 4-piece stainless steel interior liner with our unique expansion system. This liner extends down into the existing chimney and provides a safe attachment.

The stainless steel liner is surrounded by a layer of high-temperature insulation which keeps the inner liner warm.

The top of the Model T Chimney Pot is the same size as the top of most 12 x 12 flue tiles, allowing installation of most standard chimney caps and cap/dampers

4 piece stainless steel interior wrapped with high temp insulation.
(note: shown with top cover removed)

The 12 x 12 will fit interior flue dimensions from 10.5" to 11.7" square. The height of the outside cowl is 30" (2 1/2 feet)

Existing flue tile can be flush with chimney crown or up to 8" above crown.
